hr202458@gmail.com | +91 6396209387 | linkedin.com/in/harsh-85b780294 | github.com/Harsh202458

Technical Skills

Languages: TypeScript, JavaScript (ES6+), Python, Java, C++, Dart, SQL, HTML5, CSS3

Frontend: React.js, Next.js 15 (App Router), Tailwind CSS, Framer Motion, HTML5 Canvas, Flutter

Backend & Databases: Node.js, Express.js, REST APIs, WebSockets, Prisma ORM, PostgreSQL, MongoDB

Cloud & DevOps: AWS (S3, EC2, IAM, Bedrock, Textract), Vercel, Docker, GitHub Actions, CI/CD, Git

Fundamentals: Data Structures & Algorithms, Object-Oriented Programming, System Design, Caching

Experience

Software Engineering Intern

May 2026 – Jun 2026

Hyundai India Insurance Broking Pvt. Ltd.

Gurugram, India

- Shipped full-stack modules for Safe Orbit, an enterprise vehicle insurance platform, by building asynchronous Node.js/Express REST APIs on AWS backed by PostgreSQL (policy records) and MongoDB (telematics logs).
- Reduced claim turnaround time by **40%** by engineering an automated verification pipeline that parses repair estimates and damage photos into structured JSON with AWS Textract and Amazon Bedrock.
- Removed large media uploads from the API servers by implementing AWS S3 presigned URLs with multipart upload, enabling direct client-to-cloud transfer of high-resolution accident photos.
- Lowered p95 API response latency by **28%** on high-traffic policy endpoints by adding indexes and tuning slow PostgreSQL query plans.
- Secured platform APIs against unauthorized access by implementing JWT token rotation, OTP authentication, and role-based access control (RBAC).

Projects

Matchroom – Agent Simulation & Real-Time Graph Platform

Live Demo | github.com/Harsh202458/agent-c-dating

Next.js 15, React 19, TypeScript, Google Gemini API, Tailwind CSS, Vercel

- Rendered a real-time graph of 25 autonomous agent nodes at 60 FPS by building a physics simulation in Next.js 15 and React 19, deployed to Vercel with Git-driven CI/CD.
- Kept simulations running through Gemini API throttling and network timeouts by engineering a three-tier fallback chain (Gemini Flash, then Gemini Pro, then a heuristic engine).
- Cut p95 response latency on replayed simulations to under **50 ms** by caching LLM results under order-independent agent-pair keys, removing repeat Gemini API calls.

TrackFlow – Logistics Tracking & Dispatch Engine

github.com/Harsh202458/lastmile-delivery-tracker

TypeScript, React 18, Node.js, Express, Prisma ORM, PostgreSQL

- Prevented duplicate driver dispatches under concurrent requests by designing a geo-zone scoring assignment algorithm with idempotent writes and an agent-availability state machine.
- Delivered full audit traceability for every package status transition by designing an append-only, timestamped ledger in PostgreSQL with Prisma ORM.
- Enabled customers to track packages and reschedule failed deliveries without agent involvement by building REST APIs and a self-service React portal.

SketchToUI – Multimodal AI Wireframe-to-Flutter Compiler

github.com/Harsh202458/sketchtoui-backend

Node.js, Express, Flutter, Google Gemini Vision API, Cloudinary, Render

- Automated conversion of hand-drawn wireframe photos into Flutter widget code, replacing manual UI boilerplate, by building a two-stage Google Gemini Vision pipeline behind a Node.js/Express API.
- Improved code-generation accuracy by separating layout detection (AST component hierarchy) from Dart code synthesis, so each stage could be validated independently.
- Kept generation available under Gemini rate limits by implementing multi-tier model failover and offloading media ingestion to Cloudinary CDN, with the backend deployed on Render.

Education

Vellore Institute of Technology

2023 – 2027

B.Tech in Computer Science and Engineering – CGPA: 8.28 / 10.0

India

Certifications

AWS Certified AI Practitioner – Amazon Web Services

2026 – 2029

AWS Certified Cloud Practitioner – Amazon Web Services

2026 – 2029
