Professional Summary

Problem-solver driven by curiosity for building scalable backend services, real-time distributed systems, and production multimodal AI applications. Experienced in developing end-to-end full-stack architectures using Node.js, Express, Flutter, and PostgreSQL, integrating computer vision pipelines, and optimizing high-throughput client-server communication.

Technical Skills

Languages: Java, JavaScript (ES6+), Dart, Python, C++, SQL, HTML/CSS

Core Competencies: Data Structures, Algorithms, Object-Oriented Programming (OOP), System Design

Cloud & DevOps: AWS (S3, EC2, Bedrock, Textract), Render, Docker Basics, Git, GitHub, Postman, CI/CD

Backend, Frontend & Tools: Node.js, Express.js, Flutter, React.js, PostgreSQL, MongoDB, Prisma ORM, REST APIs, WebSockets

Work Experience

Software Engineering Intern

May 2026 – June 2026

Hyundai India Insurance Broking Pvt. Ltd.

Gurugram, India

- Architected and shipped end-to-end full-stack modules for Safe Orbit, an enterprise vehicle insurance platform; built asynchronous Node.js/Express microservices and a dual-database tier (PostgreSQL for policy records, MongoDB for telematics logs).
- Engineered an automated claim verification pipeline integrating AWS Textract and Amazon Bedrock, parsing tabular repair estimates and damage photos into structured JSON to slash claim turnaround time by **40%**.
- Eliminated server bandwidth bottlenecks by implementing AWS S3 presigned URLs for direct client-to-cloud uploads, facilitating seamless multipart transmission of high-resolution accident photos.
- Hardened platform security via JWT token rotation, OTP authentication, and RBAC; optimized indexed query pipelines to reduce p95 API response latency by **28%** on high-traffic policy endpoints.

Projects

SketchToUI – Multimodal AI Wireframe-to-Flutter Compiler | [🔗 Live Demo](#) | [🐙 GitHub](#)

Node.js, Express, Flutter, Google Gemini Vision, Cloudinary, Render

- Developers and designers spend hours manually writing boilerplate UI code from hand-drawn sketches, so built an automated compiler transforming wireframe photos directly into production Flutter widgets.
- Engineered a 2-stage vision pipeline with Google Gemini Flash to parse hand-drawn sketches into AST component hierarchies, decoupling layout detection from plain-text Dart code synthesis.
- Deployed backend to Render with Cloudinary CDN media ingestion and client-side multi-tier model failovers, achieving 100% generation reliability and sub-second API responses.

TrackFlow – Real-Time Logistics Tracking & Dispatch Engine | [🐙 GitHub](#)

TypeScript, React 18, Node.js, Express, Prisma ORM, PostgreSQL, REST APIs

- Delivery operations suffer from opaque tracking and manual agent dispatching across distribution hubs, so built a centralized logistics engine providing real-time package lifecycle management.
- Engineered an automated driver assignment algorithm factoring in geo-zone scoring and dynamic agent availability state machines, ensuring zero duplicate dispatches during peak volume.
- Designed an immutable append-only audit ledger with cryptographic timestamps recording every status transition, paired with a self-service customer portal for failed delivery rescheduling.

StudyLens – AI Document Intelligence & Study Platform | [🐙 GitHub](#)

Flutter, Node.js, Express, Google Gemini Multimodal APIs, Google ML Kit, Render CI/CD

- Students struggle to extract structured summaries and practice quizzes from unorganized handwritten notes, so created an intelligent multimodal study assistant with on-device edge OCR.
- Coupled Google ML Kit on-device text recognition with cloud LLM inference engines, parsing complex equations, matrices, and tables with **sub-800ms** response times.
- Architected a multi-tier fallback inference engine across Gemini models with automated rate-limit failovers, ensuring **99.9%** uptime across high-frequency student query bursts.

Education

Vellore Institute of Technology

2023 – 2027

B.Tech in Computer Science and Engineering – CGPA: 8.28/10.0

India

Certifications

• **AWS Certified AI Practitioner** – Amazon Web Services

Valid: 2026 – 2029

• **AWS Certified Cloud Practitioner** – Amazon Web Services

Valid: 2026 – 2029
